Aircraft As of August 2019, the airport fleet consists of the following aircraft: See also References External links Official website Category:Airports in England Category:Airports in West Yorkshire Category:Airports in Greater London Category:Airports in Greater Manchester Category:Heathrow Airport Holdings Category:History of transport in Greater London Category:Defunct airports in EnglandQ: Python: Class with two variables I am currently coding a python Class to compute the Jones. Class Element(object): def __init__(self, name, val): self.name = name self.val = val self.jones = 1 What I want to do is to have a function jones() so that it will add val to jones based on the name (this is the idea) So here is an example: i = Element("Element1", 5) ii = Element("Element2", 6) print (i.jones) # add the val to the class print (ii.jones) # will give 15 Any help is appreciated A: I'd use a dict for this. >>> class Element(object): ... def __init__(self, name, val): ... self.name = name ... self.val = val ... self.jones = 1 ... def jones(self): ... return self.val + self.jones ... >>> d = dict([('a', 1), ('b', 2)]) >>> i = Element('element1', 5) >>> ii = Element('element2', 6) >>> print i.jones() 10 >>> print ii.jones() 16 >>> print d[i].jones() 15 Q: How to make symfony's Twig extension respond to events? Symfony's Twig extension is a real lifesaver, but I can't find any good documentation or examples 82157476af
